

COMPANY PROFILE / EUROPEAN MARKET INTRODUCTION

From post-consumer PET to export-ready rPET flakes

Poly Cleaner LLC is an Azerbaijan-based recycler manufacturing hot-washed recycled PET flakes for international industrial customers.

FEEDSTOCK

Post-consumer PET bottles

OUTPUT

Hot-washed rPET flakes

BUSINESS MODEL

Export-oriented B2B supply

PRODUCTION BASE

Baku, Azerbaijan

PRIORITY MARKET DEVELOPMENT

Central, Western and North-Western Europe - with a focus on technically aligned buyers, sample qualification, trial shipments and repeat supply relationships.

Prepared for customers, distributors and strategic partners

Issued 6 March 2026 / Version 1.2

01 COMPANY PROFILE

An export-focused recycler with a documented operating chain

Poly Cleaner LLC (Poly Cleaner MMC) collects, sorts, processes and exports post-consumer PET material. The company converts recovered PET bottles into hot-washed rPET flakes supported by documented procurement, production and export records.

Operating from Balakhani Industrial Park in Baku, Poly Cleaner combines collection-network coordination, industrial recycling and international commercial execution in one business platform.

01

Feedstock control

Post-consumer PET sourcing supported by supplier and collector documentation, weighing and purchase records.

02

Industrial processing

Sorting, size reduction, hot washing, friction cleaning, separation, drying and controlled storage.

03

Export execution

Commercial coordination from quotation and sampling through transport, customs documentation and payment.

COMPANY AT A GLANCE

Legal form	Limited Liability Company (LLC)
Established	June 2022
Production facility	Balakhani Industrial Park, Zone 1, Sabunchu district, Baku
Core products	Hot-washed clear/light-blue, green and mixed-colour rPET flakes
Business model	Export-oriented industrial supply
Customer applications	Sheet, fibre, strapping and packaging-related conversion, subject to grade and buyer qualification
Commercial focus	Central, Western and North-Western Europe
Customs classification	HS 3907690000
Monthly processing capacity	276 tonnes of post-consumer PET bottles
Finished rPET output capacity	194 tonnes per month / 2.300 tonnes per year

COMMERCIAL POSITIONING

A regional recycled-PET source for buyers who value grade selection, responsive commercial communication and document-supported traceability.

02 PRODUCTS AND MANUFACTURING

Product streams built around colour separation and buyer use

Product grade	Commercial positioning	Typical customer applications
Clear / light-blue rPET flakes	Highest-value colour stream for customers requiring visually consistent, low-colour recycled PET feedstock.	Sheet, fibre and selected packaging-related applications, subject to buyer testing and qualification.
Green rPET flakes	Separated green stream for colour-controlled conversion and stable repeat purchasing.	Strapping, fibre and other coloured PET applications.
Mixed-colour rPET flakes	Commercial stream for cost-sensitive processing where clear appearance is not required.	Fibre, strapping and other non-clear industrial applications.

Product specifications, contamination limits, moisture, intrinsic viscosity and other acceptance parameters are to be confirmed in the applicable quotation, technical data sheet and/or agreed lot documentation. This company profile does not make a food-contact compliance claim.

MANUFACTURING FLOW

01	Collection and inbound control	Post-consumer PET bottles are sourced, documented, weighed and accepted into inventory.
02	Bottle sorting	Manual pre-sorting separates non-PET items and manages colour streams before size reduction.
03	Size reduction	Bottles are granulated through an approximately 14 mm screen to produce process-ready flake.
04	Hot washing and friction	Controlled hot washing is combined with high-speed friction cleaning between wash stages.
05	Separation and drying	Float-density separation, dewatering, label separation and hot-air drying reduce residual contaminants and moisture.
06	Storage, quality review and dispatch	Finished streams move to pneumatic storage and are prepared for sampling, packing and export.

PROCESS CONFIGURATION

The current line includes two 1.5 m³ hot-wash pots, high-speed friction washing between wash stages, float-density separation, dewatering, label separation, hot-air drying and pneumatic storage.

03 QUALITY, TRACEABILITY AND EXPORT READINESS

Documentation that follows material from collection to customer

Poly Cleaner's operating model is designed to connect the physical material flow with commercial and accounting evidence. This supports buyer due diligence, shipment reconciliation and transparent issue investigation.

Control point	Representative records	Buyer relevance
Collection	Collector agreements, purchase acts, identity and payment records, applicable withholding-tax evidence	Supports source visibility and lawful procurement review
Inbound and inventory	Delivery weights, acceptance records, stock movement and supplier-linked documentation	Enables material reconciliation before production
Production	Input/output records, process and storage records, quality observations and lot references	Connects received material with finished rPET streams
Sales and export	Quotation/contract, invoice, packing list, transport, customs and payment documentation	Extends the document trail through dispatch to the customer

A

Quality approach

Manual bottle sorting, washing and separation controls, finished-stream review, sampling and buyer feedback.

B

Export documentation

Commercial invoice, packing list, transport and customs records, plus order-specific documents where applicable.

C

Delivery alignment

Volumes, Incoterms, packing, destination and payment conditions are confirmed in each commercial offer.

COMMERCIAL ENGAGEMENT PATH

01 Inquiry Grade, volume, destination and delivery expectation	02 Technical alignment Sample review and buyer specification discussion	03 Trial shipment Commercial terms, documentation and performance validation	04 Regular supply Repeat scheduling, quality feedback and continuous improvement
--	---	--	--

EUROPEAN BUYER FOCUS

Poly Cleaner prioritises transparent specification alignment and trial-order validation before moving to regular supply. DAP and alternative Incoterms can be evaluated against route, volume and customer requirements.
